What are computers?

According to the text, the Computers are machines that perform tasks or calculations according to a set of instructions, or programs. Computers work through an interaction of hardware and software. The most important piece is a tiny rectangular chip inside your computer called the central processing (CPU), or microprocessor. It's the "brain" of your computer—the part that translates instructions and performs calculations.

Addition to the CPU, the computer has items such as RAM memory, SSD, motherboard, monitor, keyboard, mouse, printer, and other components.
